

Animals including Humans

Animals including Humans- Year 4 coverage:

During Year 4, the children completed some of their Science learning at home. We will revisit these Year 4 areas to ensure secure learning alongside the new unit:

- To describe the simple functions of the basic parts of the digestive system in humans.
- To identify the different types of teeth in humans and their simple functions.
- To construct and interpret a variety of food chains, identifying producers, predators and prey.

In this unit the children will learn to:

- describe the stages of human development.
- explain how babies grow and develop.
- describe and explain the main changes that occur during puberty.
- identify the changes that take place in old age.

Working Scientifically skills used:

- Record data and results of increasing complexity using bar and line graphs in the context of the growth of babies in height and/or weight during their first year after birth.
- Report findings from enquiries, including oral and written explanations of results in the context of the gestation period for animals.

Key Facts:

The Digestive System

Human Teeth and Their Functions

**Key Vocabulary**

Fertilisation: The process of the male and female sex cells fusing together.

Prenatal: The stage of development from the time of **fertilisation** to the time of birth.

Gestation: The process or time when prenatal development takes place before birth.

Reproduction: To produce young.

Asexual reproduction: A process where one parent produces new life.

Sexual reproduction: A process where two parents – one male and one female – are required to produce new life.

Life cycle: The changes a living thing goes through, including reproduction.

Adolescence: The social and emotional stage of development between childhood and **adulthood**.

Puberty: The physical stage of development between childhood and **adulthood**.

Menstruation: When the female body discharges the lining of the uterus. This happens approximately once a month.

Adulthood: The stage of development when a human is fully grown and mature.

Life expectancy: The length of time, on average, that a particular animal is expected to live.
